DETAILED ACTION

Response to Amendment

The Amendment, filed on 12/27/2005, has been entered and acknowledged by the Examiner.

Allowable Subject Matter

Claims 1-7 and 14-19 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 1, and specifically comprising the limitation of an arc discharge tube including a phosphor coating that is thicker on the rear side of the tube than on the front side of the tube with regards to any cross section of the tube and where the tube is shaped as a curve that advances along the direction of the axis that the tube is wound around. The closest art of reference is Soules '005, which discloses the use of alternating the phosphor coating density to improve light output away from the central axis of the tube. However there is no suggestion in the prior art of record to amend the teachings of Soules to enhance light output along the direction of the central axis towards the front of the tube.

Regarding claims 2-7, claims 2-7 are allowable for the reasons given in claim 1 because of their dependency status from claim 1.

Regarding claim 14, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 14, and specifically comprising the limitation of an arc discharge tube including a phosphor coating that is thicker on the rear side of the tube

than on the front side of the tube with regards to any cross section of the tube and where the glass tube is wound around the axis from the turning part to both ends of the glass tube.

Regarding claims 15-19, claims 15-19 are allowable for the reasons given in claim 14 because of their dependency status from claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Li (US 2003/0223230 A1) discloses the use of changing tube turn diameters to reduce downward light output.
